

SCORPION SP3015

Cambelt's Scorpion Transloader SP3015 is among our most durable and versatile transloaders. It features one of the smallest footprints in the industry. It can be loaded on a single drop trailer and still be classified as a non-permitted load.

- Just under 26' centerline to centerline, 18' smaller than the industry standard.
- Provides over 16 feet of loading clearance, stretching to over 18' with the snorkel removed.
- Only 8'6" wide.
- Tier 4 diesel engine, 2-wheel drive with 4-wheel steering
- 18" hydraulic lift allows it to adjust for uneven surfaces.
- Both front and rear wheels rotate 180-degrees for maximum maneuverability.

CAMBELT'S UNIQUE CONVEYOR SYSTEM

In spite of its minimal footprint, the Scorpion Transloader SP3015 sports an enclosed conveyor rated at 8,500 cubic feet per hour at 800 FPM.

- Cambelt's monolithic CF3015 belt
- Perfectly engineered for high speed and high load capacity on conveyor inclines up to 70 degrees.
- Flexible sidewalls and hefty nubs keep material moving upward for unmatched efficiency and continuous flow.
- No glued-on sidewalls and no glued-on cleats prevents delaminated sides or nubs
- Minimized down-time and production loss due to costly repairs.

ADDITIONAL OPTIONS

Our base model is capable of handling most jobs requiring a portable transloader. Some additional options include:

- Hydraulics to lift conveyor in position once transported to site—no lifting equipment required; just setup unit, connect belt and drive-off double-drop trailer
- Dust collection system
- Drive over Slimline tail section
- Dump Hopper on Slimline with outriggers for additional support
- Hydraulic gate opener
- Hydraulically operated hopper vibrators
